

Covid vaccination - Children & teenagers

February 2022

Vaccination for children and teenagers aged from 5 to 17

Vaccination is open for all children and teenagers from 5 to 17 years without obligation. It is free.

Why vaccinate?

The young are very exposed to Covid. They catch and transmit it easily. Very rarely, they have a serious form of the illness but it can happen.

The vaccine protects them and people close to them: parents, grandparents, teachers, etc.

Where to vaccinate children and teenagers ?

5 to 11 years: health professionals, pediatric vaccination centers or mother and children services can give the vaccine.

12 years onwards: the same places as for adults.

Number of injections

5 to 11 years

1st injection 2nd injection

- Pfizer vaccine, reduced dose.
- 2nd injection after 3 weeks.
- If had Covid: 1 less injection.

12 to 17 years

1st injection 2nd injection

- Pfizer vaccine, adult dose.
- 2nd injection after 3 to 7 weeks.
- A booster 6 mois later.
- If had Covid: 1 less injection.

Parental agreement: vaccinate your child

- 5 to 11 years: agreement of 1 parent or guardian (document to be signed).
- Must be accompanied.
- 12 to 15 years: agreement of 1 parent (document to be signed) & of the teenager (spoken agreement). The teenager can attend alone.
- 16 & 17 years: parental agreement not required. The young person can attend alone.
